SUMMARY

Backend and cloud architect with 12+ years designing and modernising distributed platforms across retail, banking and healthcare. Cut distributed pricing-calculation latency from 45s to under 2s at Endava, ran inventory services for 10M+ SKUs across 1,800+ stores at 99.9% uptime at Target, and led ANZ's wholesale credit modernisation onto Kafka and AWS EKS alongside a production RAG system for credit-document analysis.

SKILLS

Architecture: Distributed Systems · Event-Driven Architecture · Architecture Governance · Performance Engineering
Platforms & Cloud: Java · Spring Boot · Apache Kafka · Redis · AWS EKS · Kubernetes · Terraform
AI Systems: RAG Architecture · LangChain · OpenAI GPT · Python

PROFESSIONAL EXPERIENCE

Endava

Oct 2025 – Present

Senior Development Lead · Bangalore, India

- Cut distributed Medicare pricing-calculation latency from 45s to under 2s by redesigning the calculation flows and caching hot rate-table and pricing data in Redis on AWS EKS.
- Improved environment provisioning speed by 60% by defining the Terraform modules and CI/CD pipeline patterns adopted across engineering teams.
- Own end-to-end architecture of the healthcare pricing platform — IPPS/MS-DRG, OPPS/APC, Physician Fee Schedule and commercial contract pricing — exposed as APIs to downstream claims and billing systems.
- Lead architecture governance and cross-team design reviews for HIPAA- and SOC 2-compliant services, setting the security, resilience and operability standards used across environments.
- Introduced spec-driven development (Spec Kit) with an AI coding agent and architect review of every generated plan, keeping specifications, tests and code in sync.

Tech: Java · Spring Boot · AWS EKS · Redis · Terraform · Kubernetes · CI/CD

ANZ

Nov 2023 – Sep 2025

Lead Engineer · Bangalore, India

- Improved API latency by 35% and reduced cloud spend by 20% on the wholesale credit platform through performance tuning and an autoscaling strategy across Spring Boot services on AWS EKS.
- Shaped the target architecture and modernisation roadmap for legacy wholesale credit systems, replacing tightly coupled batch processes with Kafka-based event-driven credit workflows.
- Designed and built a production RAG system in Python for credit and legal document analysis — ingestion, chunking, embeddings, vector retrieval and generation with LangChain, OpenAI GPT and Hugging Face models — automating manual document review across multiple use cases.
- Turned user feedback on generated outputs into a repeatable evaluation loop for answer accuracy and relevance, and packaged the prompts, conventions and integration patterns as a reusable framework adopted across multiple business units.
- Mentored engineers, led design reviews and established the enterprise observability practices used for production troubleshooting of critical credit processes.

Tech: Java · Python · Spring Boot · AWS EKS · Kafka · LangChain · OpenAI GPT · Hugging Face

Target Corporation

Aug 2018 – Nov 2023

Senior Software Engineer · Bangalore, India

- Architected event-driven inventory services tracking 10M+ SKUs across 1,800+ stores and digital channels, sustaining 99.9% uptime for business-critical inventory workloads.
- Led the migration from on-premise infrastructure to a multi-cloud AWS and GCP footprint, reducing infrastructure costs by 20%.
- Designed the inventory domain services and event contracts, and built high-throughput Kafka consumers for real-time inventory updates with Java, Spring Boot and MongoDB.
- Implemented the Kubernetes deployment and reliability practices that business-critical inventory services ran on.
- Resolved performance and scalability bottlenecks across enterprise inventory workflows, working across engineering and business teams.

Tech: Java · Spring Boot · Kafka · Kubernetes · AWS · GCP · MongoDB

Philips Innovation Campus

Oct 2016 – Aug 2018

Senior Software Engineer · Bangalore, India

- Built secure REST APIs for connected healthcare-monitoring devices using Java, Spring Security and JWT-based authentication.
- Designed the Docker and Kubernetes platform topology for connected-device workloads, introducing containerised deployment for medical-device services.

Cognizant Technology Solutions

Dec 2013 – Sep 2016

Programmer Analyst · India

EDUCATION & CERTIFICATIONS

Bachelor of Engineering · Computer Science & Engineering — Jawaharlal Nehru National College of Engineering, Shimoga · Visvesvaraya Technological University · 2013

AWS Certified Developer — Associate · Amazon Web Services

Spring Professional Certification · VMware / Pivotal
